

Cloud Identity & Entitlements Management

Datasheet

Overview:

CIEM, a cutting-edge platform, takes the helm in ensuring the highest standards of security within your Cloud environment. As businesses transition to cloud-based infrastructures, CIEM stands as the guardian, continuously monitoring entitlements across IaaS, PaaS, and databases hosted or managed natively within Cloud environments.

Key Features:

- 1. Visibility of Entitlements and Actions:** CIEM provides unparalleled visibility into the complex web of entitlements and actions within your Cloud ecosystem. Know exactly which identity can execute what action using specific entitlements, ensuring a granular understanding of user permissions.
- 2. Privileged IAM Operations:** Detect, monitor, and remediate over-permissioned and long-standing privileges. CIEM empowers you to maintain control over privileged IAM operations, safeguarding your Cloud infrastructure against potential security risks.
- 3. Authorization Graph:** Unravel the intricate pathways of entitlements by which identities access critical resources and applications. CIEM's Authorization Graph feature provides a comprehensive visualization, enabling you to comprehend and manage access with precision.

4. Support for Non-Human Identities: In the diverse landscape of Cloud environments, CIEM goes beyond traditional identity management by extending support for non-human identities. This ensures a comprehensive approach to identity and access management, covering all facets of your digital ecosystem.

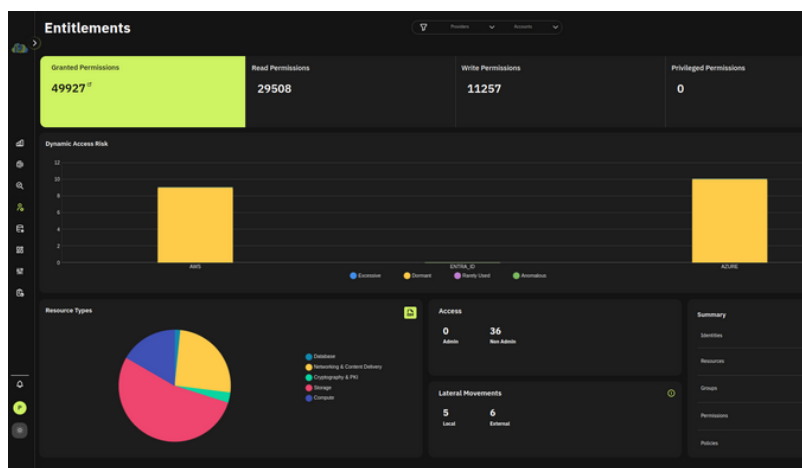

5. IAM and Identity Security Analytics: Stay ahead of potential threats with CIEM's advanced IAM and Identity Security Analytics. Leverage actionable insights derived from comprehensive analytics, enhancing your ability to proactively manage security risks.

6. Entitlements Governance: CIEM serves as your governance ally, facilitating robust entitlement management practices. Ensure compliance, streamline workflows, and enhance the overall governance of entitlements within your Cloud environment.

7. Seamless Integration: Seamlessly integrate CIEM with your Access Management, Customer IAM, IDP, and IGA processes. CIEM is designed to complement and enhance your existing infrastructure, ensuring a cohesive and streamlined security framework.

Benefits

- Discovering Non-Human / machine identities having access to your cloud
- Centralized visibility across all IDP's including data clouds like Snowflake and not just public cloud environments like traditional CIEM which means a consolidated view across your cloud assets
- Facilitates governance across multi-clouds

Conclusion:

Elevate your Cloud security posture with Cloud Identity Entitlements Management Where Visibility, Control, Governance, and Integration converge for a secure digital future.
