

Identity and Access Governance

Datasheet

Overview:

Traditional Identity and Access governance practices are outdated, leaving managers in the dark about their reports, access. Cloud environments often suffer from over-permissioned access, prioritizing productivity over safety. Rampant data sharing practices expose sensitive customer data to unauthorized access, leading to frustration for end-users, managers, auditors, and GRC teams. Access Reviews have the potential to significantly enhance operational security, prevent incidents, and ensure continuous compliance.

Product Highlights:

Real-time Data, Analytics, and Workflows:

Identity and Access Governance provides a comprehensive solution for Identity and Access Events, addressing risks, threats, vulnerabilities, and policy violations. Automated workflows include notifications, access reviews, recertifications, and investigations, empowering managers, GRC teams, and security operations to instantly review, investigate, and revoke access through trusted automation.

Key Features:

- Support for tens to hundreds of Identity and Access events across the enterprise.
- Policy catalog covering Identity Posture, Insider Threats, Privileged Access abuse, credential sharing, lateral movement, toxic combinations, separation of duties, third-party access, and customizable events.

- Targeted Access Reviews for high-risk scenarios and user groups, including GitHub, Production Accounts, SRE Access, Databases, SaaS Applications, and Privileged Accounts.
 - Automated workflows integrated with Jira, Slack, PagerDuty, and seamless integration with SIEM and SOAR tools.
 - Integration with Access Management, Customer Identity and Access Management (CIAM), and Identity Governance and Administration (IGA) processes.

Real-time Data, Knowledge, and Risk Context:

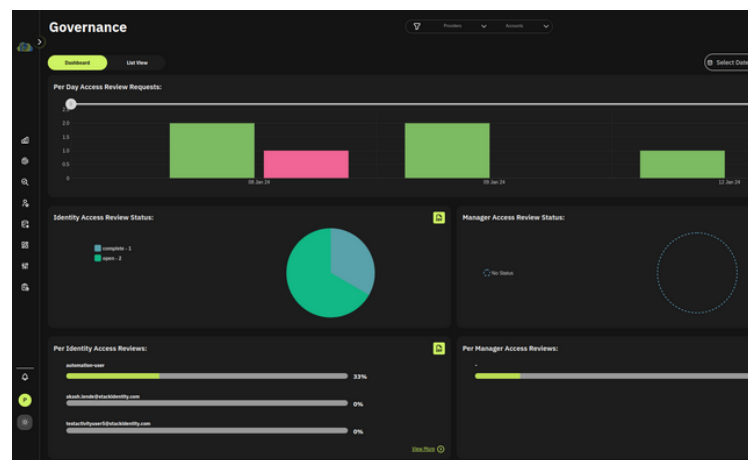

Identity and Access Governance delivers real-time insights into how Identities are being used, how Access is granted, the escalation of privileges, and the potential risks to data and business-critical assets.

Implement Intelligent and Targeted Access Reviews:

Customers can leverage intelligent and targeted Access Reviews using identity, access, and privileged context across enterprise assets with high fidelity and precision.

Benefits

- Proactive identification and mitigation of Identity and Access Risks.
- Streamlined workflows for efficient access reviews and investigations.
- Integration with a variety of tools for seamless operations.
- Real-time insights for informed decision-making.

Conclusion:

Elevate your Identity and Access Governance to a new standard with our solution, ensuring security, compliance, and precision in managing access across your enterprise.
